Resolve r

Every review becomes a resolved case

SDG

8 DECENT WORK AND ECONOMIC GROWTH

Owner-run cafés lose customers when reviews go unanswered

A customer waits 40 minutes.

At 11pm, a 2-star review appears.

The reply is late, rushed — or never sent.

Resolve turns every review into a case

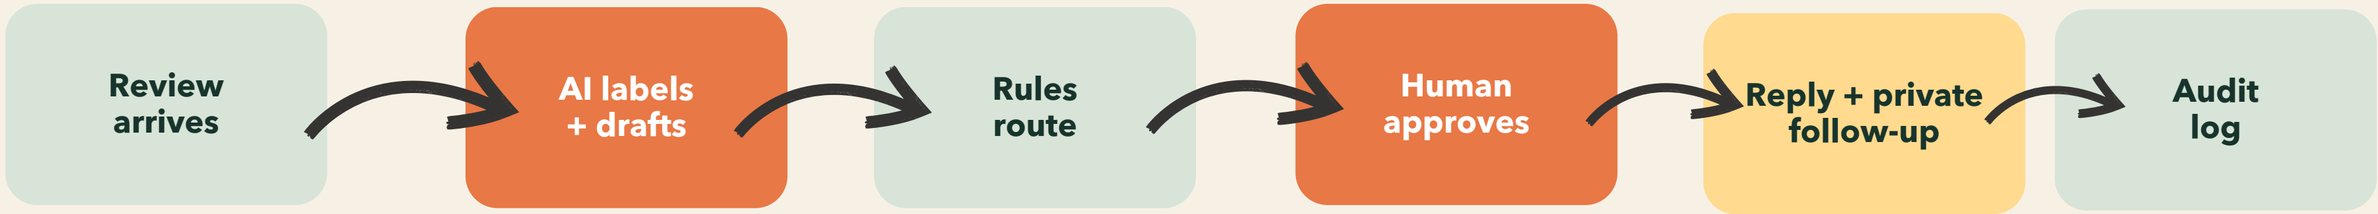

Built for owner-run cafés with one to three outlets —
where the owner approves and replies.

2★ review
“Waited too long.”

One simple journey

AI is one step — control stays with people.

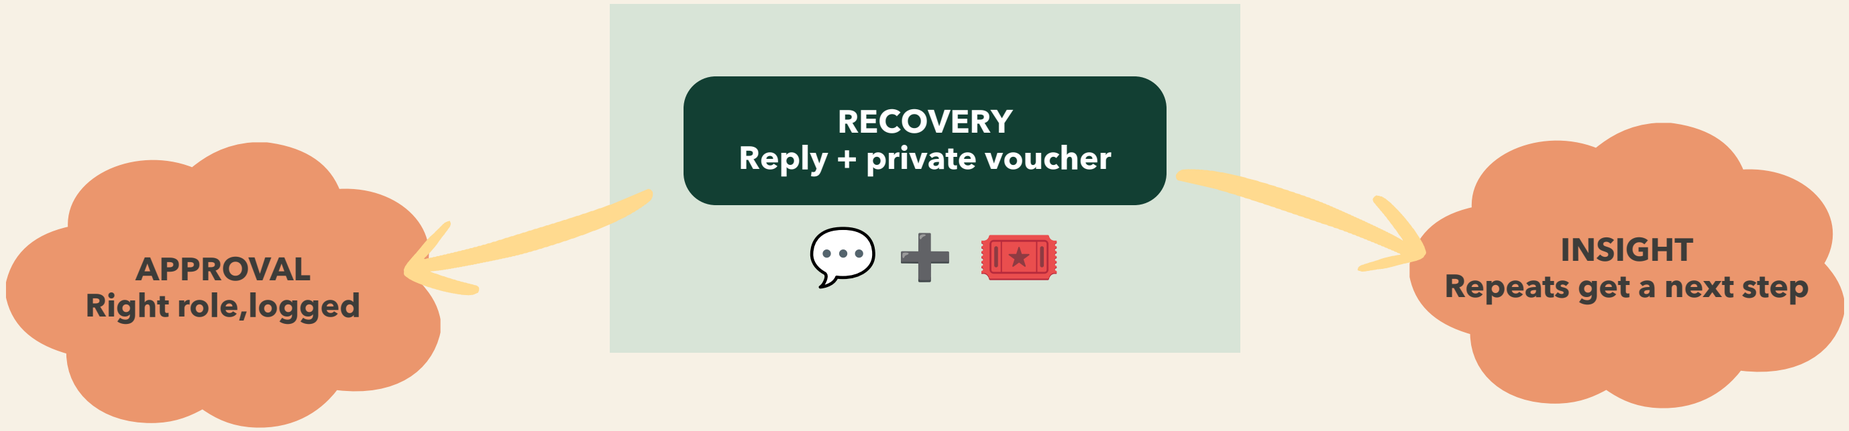

Every handoff is visible. Every decision has an owner.

Not another review site 🧾

Review sites collect reviews. Resolve turns each one into a case with an owner.

Unsatisy customers? Resolve can do a private follow up by compensating a voucher to that specific customer via whatsapp (simulated)

When a bad review comes in

Public reply

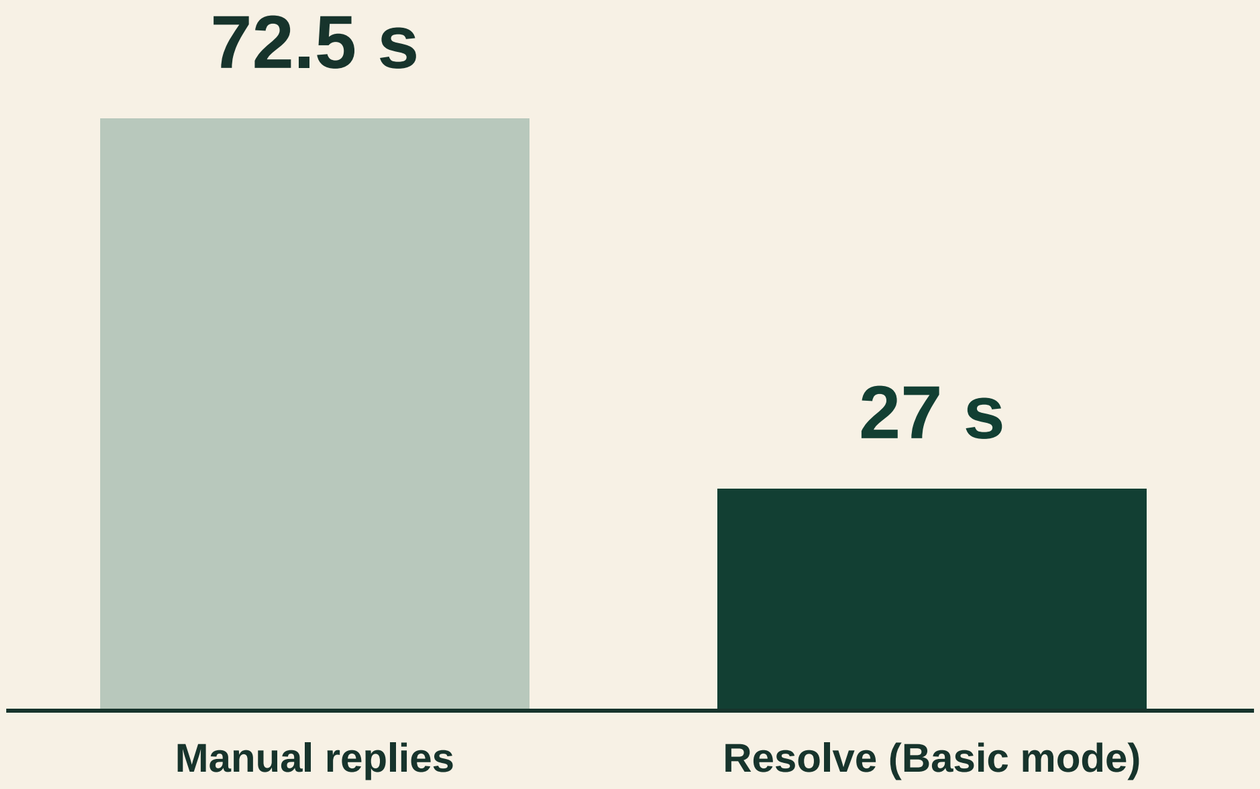

- A thoughtful reply, drafted for you
- Sent only after a human approves
- Google posting is simulated
- Nothing about the voucher is public

Private WhatsApp

- Goodwill voucher goes to the guest only
- “Sorry about the wait. RM 10 off your next visit.”
- WhatsApp is simulated
- Every step is saved in the audit log

Handling a review is 62.7% faster

Time per review · timed test of 10 synthetic reviews

62.7%

less handling time

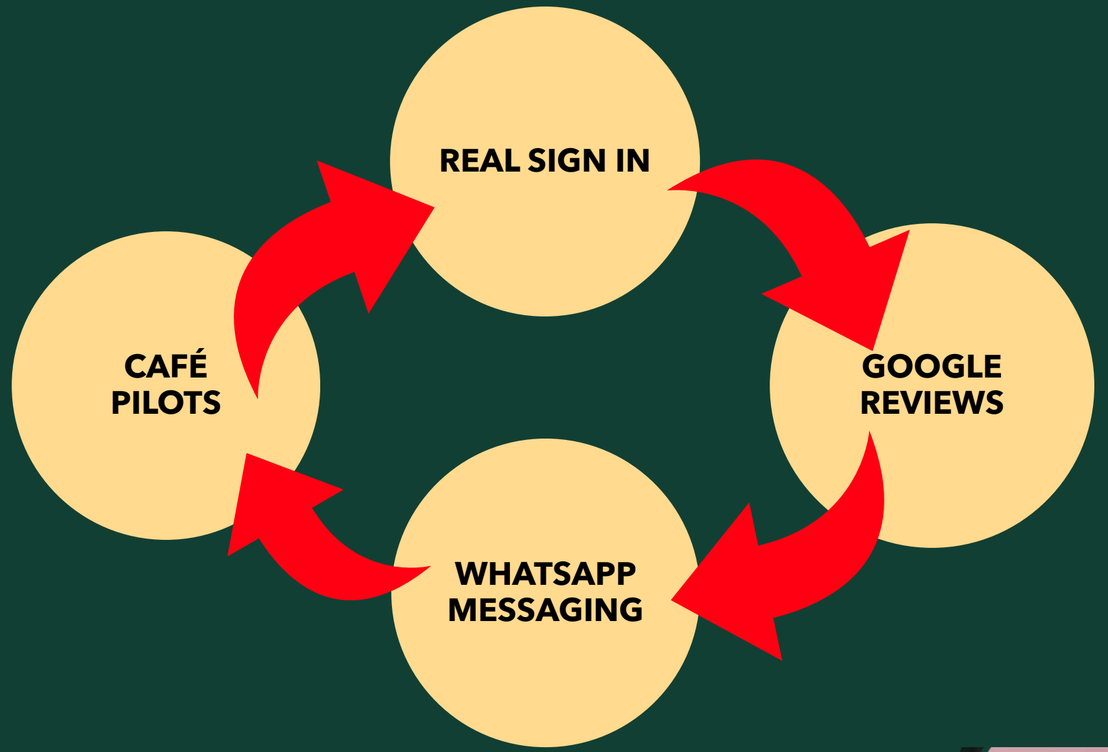

72.5 s by hand vs 27 s with Resolve. Our own small test: two simulated outlets, Basic mode. Live site security headers: 125/100 (A+).

It fits Orbyte as a module many SMEs can reuse

The same engine can later serve other small service businesses.

Simulated today, real next

Simulated today: sign-in, the Google review page, WhatsApp.

Already real: role rules, approval, routing, audit log, security headers.

THE ASK

Café pilot partners + product feedback

SDG 8 · Helping small businesses use technology to work better.

Rules and roles keep money and replies under control

OWNER · above RM 20 + high severity

MANAGER · approve ≤ RM 20

STAFF · prepare case

Food safety and other high-severity cases always go to the Owner.

Enforced on the server · recorded in an append-only log
