SDG 8 · Decent Work and Economic Growth

THE PROBLEM

Owner-run cafés lose customers through reviews nobody handles

FRIDAY, 11:04 PM

“Tunggu 40 minit, staff rude gila.”

★★☆☆☆ · Aina, Bangsar

The owner is closing up. The reply is late, rushed, or never sent.

Reviews are scattered
Google, WhatsApp, a staff member’s memory.

Nobody knows who may say sorry with money
Staff guess, or wait for the owner.

The same complaint keeps coming back
Slow Friday nights, every Friday.

By hand: 72.5 seconds and 7 steps per review (our Phase 1 timed test)

OUR USER

One clear user: the owner of a café with one to three outlets

Owner

Approves anything about money or safety. Wants fewer surprises, not another dashboard.

Manager

Runs the outlet day to day. Can approve replies and a goodwill voucher up to RM 20.

Staff

Frontline. Thanks happy guests; never has to decide about refunds.

The recurring chore: **turning each review into the right reply, from the right person, with a record**.

THE SOLUTION

Resolve turns every review into a case with an owner

1 · Trigger

Guest scans the QR or taps the NFC card and leaves a review

2 · Check

Duplicate and spam check against past reviews

3 · Understand

AI reads BM, English or Manglish and drafts a reply

4 · Route

Plain rules pick Staff, Manager or Owner

5 · Approve

The right person approves, edits or rejects

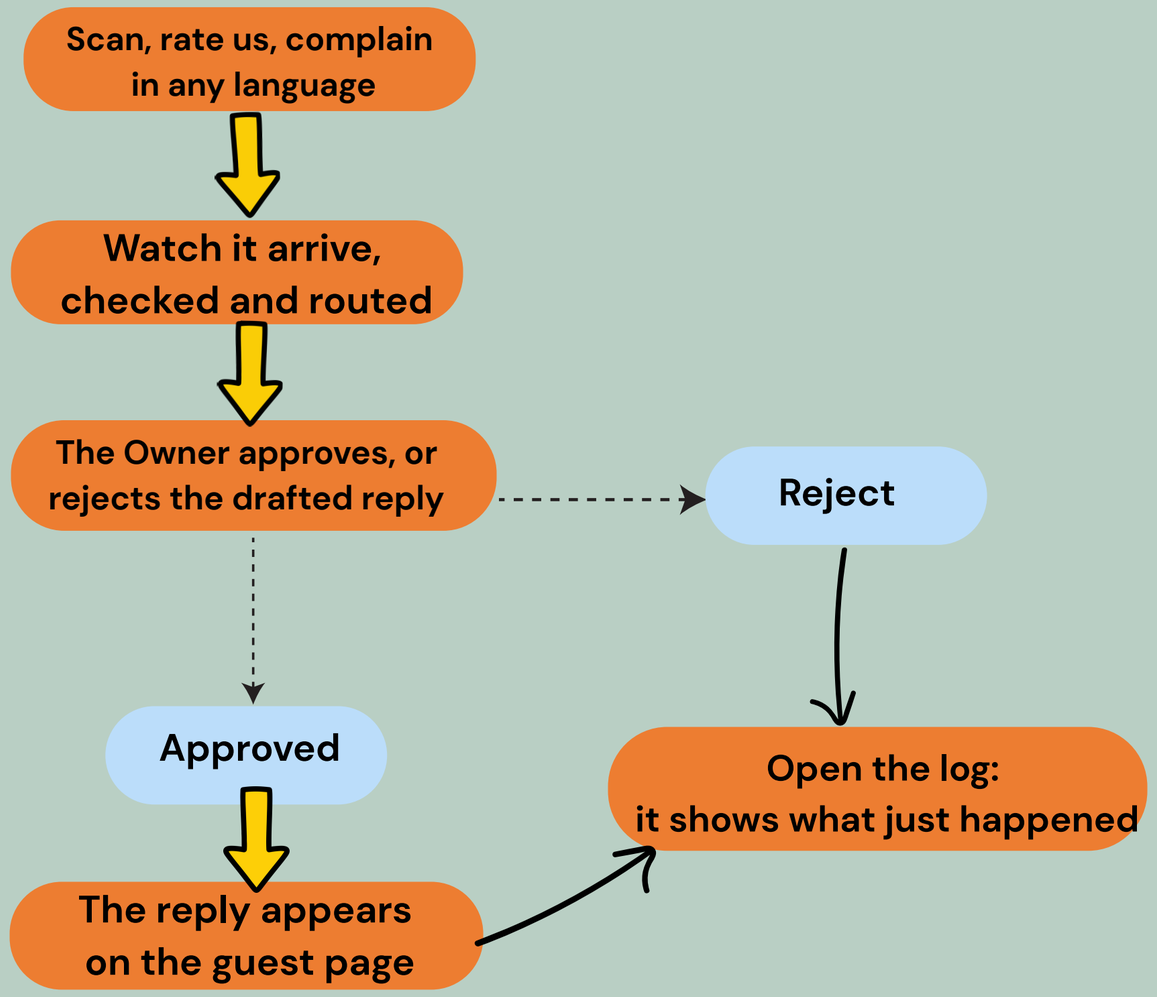

6 · Record

Reply posts; every step goes into a locked log

A governed workflow with AI inside one step. Not a chatbot.

LIVE DEMO

Leave us a bad review.

Brew & Kin · Bangsar guest page

Stands in for the café's Google listing

BENEFIT IN NUMBERS · AGAINST OUR PHASE 1 TARGETS

Measured from Resolve’s own log

82.8%

faster per review

72.5 s by hand → 12.5 s median in the app · target 60% · Phase 1 test: 62.7%

100%

correct routing

55 of 55 labelled reviews, 5 business types · target 90%

100%

human-approved actions

every reply and voucher has a logged approval · target 100%

7 → 2

manual steps

read the draft, then approve, edit or reject

≈ 30 min

saved per outlet a week

(72.5 s - 12.5 s) × 30 reviews ÷ 60 · assumes 30 reviews a week

Next

first-time café staff test

with real café teams in the pilot · target 80% unaided

All reviews are synthetic test data. Times are real: each approval is timed inside the app and logged. Routing: rerun live on the Impact page.

PEOPLE STAY IN CONTROL

Nothing posts and no money moves until the right person says yes

Role	Can approve	Cannot
Owner	Everything, proritize safety and money	—
Manager	Complaints, vouchers up to RM 20	Safety cases, over RM 20
Staff	Simple thank-you replies	Complaints, any voucher

Checked on the server.
A wrong role gets “no” and nothing changes.

Safety, harassment, money issues always go to the Owner, even with AI off.

A locked log.
The database itself blocks edits and deletes.

Remove access the day someone leaves. They are logged out at once.

AI ONLY WHERE IT ADDS JUDGEMENT

AI reads and writes. Rules decide. People approve.

The AI does

- Reads Bahasa Melayu, English and Manglish
- Picks a category and severity
- Drafts a reply with a one-line reason
- Words the fixes on the Improve page

Model: gpt-5.4-mini via KrackedDevs, strict JSON, 12 s timeout

Plain rules do

1. Who handles it (rules R0 to R6)
2. Voucher limits and escalation
3. Duplicate and spam checks
4. Every number on every page

AI down or slow? **Basic mode** uses keywords and templates. Nothing stops.

NEW FOR THE FINAL · IMPROVEMENT CHECKLIST

Review sites show the complaint. Resolve shows whether the fix worked.

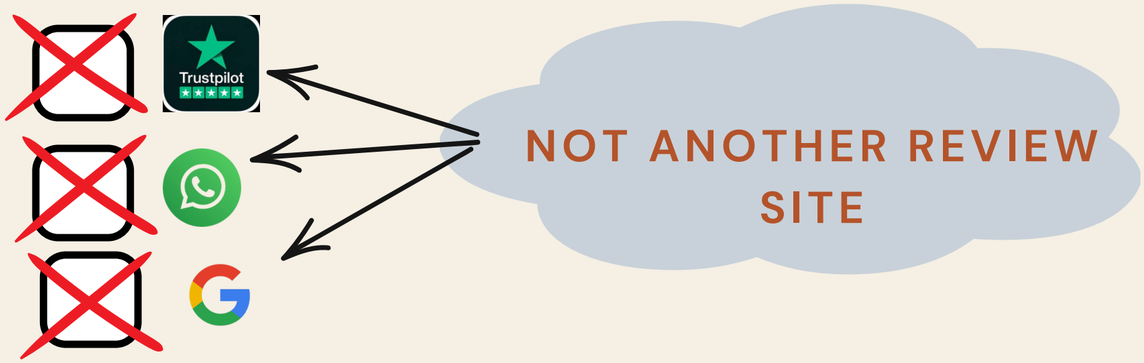

1. **Counts** repeat complaints from the café's own cases
2. **Suggests** one concrete fix each, worded by AI, with the evidence
3. **The Owner decides:** accept, edit, dismiss, mark done
4. **Measures** complaints per week, before vs after

Slow service · Bangsar · "Add one staff member on Friday evenings"

BEFORE	AFTER	
1.5	0.6	−60%
a week	a week	fewer complaints

Demo figures from synthetic seeded history (6 complaints in the 4 weeks before, 1 in the 12 days after). Counts come from the database, never from the AI.

Review platforms show reviews.
Resolve handles them.

The question	Review platforms	Resolve
Who replies?	Whoever logs in	The right role, by rule
Who may offer a voucher?	Not covered	Manager up to RM 20, else Owner
Food safety complaint?	Same queue as praise	Straight to the Owner, overdue in 2 h
Proof of what happened?	Not covered	Locked activity log
Did the fix work?	Not covered	Before vs after, per week
Manglish and BM?	Varies	Built in

ORBYTE FIT AND A SECOND BUSINESS

One module inside Orbyte, for any SME that gets reviews

Orbyte
Sign-in, roles, outlets, Google and WhatsApp connections

Resolve
One event in: **review received**
One event out: **reply posted**, after approval

Data
Business, outlet, case, locked log

A second business signs up on one page and gets its own QR code. Same rules, its own words:

Café | Salon | Retail shop | Car workshop | Pet care

BUSINESS MODEL

Priced for a café owner, sold through Orbyte

SUBSCRIPTION

RM 49

per outlet, per month

Every role, the AI step, the log, Impact and the improvement checklist.

Starter kit · RM 30 one-off

QR counter stand + NFC card, sold near cost. The business is the subscription.

Why it pays

≈ 30 owner-minutes saved a week per outlet. Keep one regular who spends RM 15 a week (≈ RM 60 a month) and it pays for itself.

How we reach them

An add-on module for Orbyte's SME customers, then café associations and partners.

PRIVACY AND HONEST LIMITS

Little data, clear access, and clear about what is simulated

PDPA by design

- Guests give a first name, a rating and the review
- The AI sees only the outlet, rating and text
- No customer data trains any model
- Role and outlet decide who sees what
- Passwords stored as salted hashes

Simulated today, real next

Simulated: the Google review page, WhatsApp sending, the demo data.

Real: logins, roles, server-side approval, routing, the locked log, measurements.

Next: Google Business Profile replies and WhatsApp Business, through Orbyte.

THE ASK

Ten café owners for a 30-day pilot.

Pilot partners

- Orbyte
- Rotary
- XMUM Networks

Real channels

- Google Business Profile and WhatsApp Business access

What we measure

- Handling time, approvals and repeat complaints, per café

Every review becomes a resolved case.

SDG 8 · owners get time back
